

SUSTAINABLE FOREST MANAGEMENT
2012 ANNUAL REPORT
APRIL 1, 2012 TO MARCH 31, 2013
CANFOR FORT NELSON

Prepared by Darrell Regimbald, RPF

June 28, 2013¹

Detailed Review of SFM Measure Performance	13
Criterion 1.0 Biological Diversity	13
1-1.1 - Ecosystem area by type.....	13
1-1.2 – Forest area by type and species.....	14
1-1.3 – Forest area by Seral stage or age class.....	15
1-1.4.1 - Degree of within stand structural retention – WTP percentage.....	15
1-1.4.2 – Degree of within stand structural retention – Dispersed Retention	16
1-1.4.3 – Degree of within stand structural retention – Riparian management	16
1-1.5 – Shrub Habitat	17
1-2.3 - Proportion of regeneration comprised of native species	18
1-3.1 - Percentage of stands artificially regenerated that are free from genetically modified organisms (GMO’s)	18
1-4.1 - Proportion of identified sites with implemented management strategies	19
1-4.2 - Protection of identified sacred and culturally important sites	19
Criterion 2.0 Ecosystem Condition and Productivity.....	20
2-1.1.1 - Reforestation success – Regen Delay.....	20
2-1.1.2 - Reforestation success – Free Growing.....	20
2-1.1.3 - Percentage of silviculture obligation areas with significant detected forest health damaging agents which have treatment plans	21
2-1.1.4 - Evidence of efforts being made to manage known significant forest health damaging agents.....	21
2-2.1 - Additions and deletions to the forest area	22
2-2.2 - Proportion of long term sustainable harvest level that is actually harvested.....	22
Criterion 3.0 Soil and Water	23
3-1.1 - Level of soil disturbance.....	23
3-1.2 - Level of Downed woody debris	23
3-2.1.1 - Proportion of watersheds or water management areas with recent stand replacing disturbance – Watersheds	24
3-2.1.2 - Proportion of watersheds with recent stand replacing disturbance – Roads and Structures	24
Criterion 4.0 Role in Global Ecological Cycles	25
4-1.1.1 - Net carbon uptake – Total Carbon Storage.....	25
4-1.1.2 - Net carbon uptake – Sequestration rate.....	26
4-1.2 – Reforestation Success.....	26
4-2.1.1 - Addition and deletions to the forest area	27

4-2.1.2 - Evidence of best efforts to coordinate forest management activities with the oil and gas industry	27
Criterion 5.0 Economic and Social Benefits	28
5-1.1.1 - Quantity and quality of timber and non-timber benefits, products and services produced in the DFA - Timber	28
5-1.1.2 - Quantity and quality of timber and non-timber benefits, products and services provided in the DFA – Non-Timber	28
5-1.1.3 - Participants forest management activities will not negatively impact established recreational sites and trails	29
5-1.1.4 - Forest management activities will be consistent with Visual Quality Objectives (VQOs)	30
5-2.1.1 - Levels of investment in initiatives that contribute to community sustainability	30
5-2.1.2 - Amount of stumpage paid in the Fort Nelson DFA.....	31
5-2.2 - Level of investment in training and skills development	31
5-2.3 - Level of direct and indirect employment	32
5-2.4 - Level of Aboriginal participation in the forest economy	32
6-1.1 - Evidence of good understanding of the nature of Aboriginal title and rights	33
6-1.2 - Evidence of best efforts to obtain acceptance of management plans based on Aboriginal communities having a clear understanding of the plans.....	33
6-1.3 - Level of Management and/or Protection of areas where culturally important practices and activities (hunting, fishing, gathering) occur	34
6-2.1 - Evidence of understanding and use of Aboriginal knowledge through the engagement of willing Aboriginal communities, using a process that identifies and manages culturally important resources and values.....	34
6-3.1 - Evidence that the organization has co-operated with other forest dependent businesses, forest users and the local community to strengthen and diversify the local economy	35
6-3.2 - Evidence of co-operation with DFA related workers to improve and enhance safety standards, procedures and outcomes in all DFA workplaces and affected communities	35
6-3.3 - Evidence that a worker safety program has been implemented and is periodically reviewed and improved.....	36
6-4.1 - Level of Participant and PRISM satisfaction with the public participation process	36
6-4.3 - Evidence of efforts to promote capacity development and meaningful participation for Aboriginal communities	38
6-5.1 - Number of people reached through educational outreach.....	39
6-5.2 - Availability of summary information on issues of concern to the public	40

Glossary and Acronyms

Adaptive Management: A learning approach to management that recognizes substantial uncertainties in managing forests and incorporates into decisions the experience gained from the results of previous actions. Adaptive management can be simplified into "learning by doing."

Annual Allowable Cut (AAC): The allowable rate of timber harvest from a specified area of land. The Chief Forester sets specific AACs for Timber Supply Areas and Tree Farm Licences in accordance with Section 8 of the *Forest Act*.

Biogeoclimatic Ecosystem Classification (BEC): A hierarchical system of ecosystems that integrates regional, local and chronological factors and combines climatic, vegetation and site factors.

Biological richness (species richness): The number of species in a given area.

Coarse woody debris (CWD): Downed woody material of a minimum diameter or greater that is resting on the forest floor or at an angle to the ground of 45 degrees or less. CWD consists of sound and rotting logs and branches, and may include stumps when specified. Coarse woody debris provides habitat for plants, animals and insects, and a source of nutrients for soil development.

Criterion: A category of conditions or processes by which sustainable forest management may be assessed; characterized by a set of related indicators which are monitored periodically to assess change.¹

Crown Forest Land Base (CFLB): Forested land managed by the Ministry of Forests and Range is referred to as the Crown forested land base. In the CFLB, specific conditions (e.g. a stand or a group of similar trees) are assigned either to the non-harvesting land base or to the timber harvesting land base. An area can only be removed for one reduction type; for example, the area of a stand that falls within a park, and also has sensitive soils, is assigned only once to the non-harvesting land base.

Customary use rights: The rights of First Nations peoples to use lands and resources based on culturally established patterns of utilisation and management which may include fishing; hunting; trapping; gathering of foods, medicines and materials for ceremonial, spiritual, sustenance, or fabrication (e.g. clothing, artwork, building, etc.) purposes.

Defined Forest Area (DFA): A specified area of forest, including land and water. The Defined Forest Area for the Sustainable Forest Management Plan is the Vanderhoof Forest District, excluding private land and woodlots.

Forest Management System (FMS): The FMS is a systematic means of identifying, addressing and managing environmental impacts and sustainable forest management commitments within Canfor's Woodlands operations.

Forest and Range Practices Act (FRPA): The *Forest and Range Practices Act* brings in the application of a results-based system for the management of forest and range resources. It will fully replace the *Forest Practices Code of British Columbia Act* by December, 2005.

General Development Permit (GDP): permit obtained by oil and gas sector to authorize limited development of an area in preparation for exploration activities for oil and gas.

Global ecological cycles: The complex of self-regulating processes responsible for recycling the Earth's limited supplies of water, carbon, nitrogen and other life-sustaining elements.

Inoperable: Lands that are unsuited for timber production now and in the foreseeable future because of a range of factors, including elevation; topography; inaccessible location; low value of timber; small size of timber stands; steep or unstable soils; or designation as parks, wilderness areas, or other uses incompatible with timber production.

Indicator: A measure of an aspect of the criterion; a quantitative or qualitative variable which can be measured or described and which, when observed periodically, demonstrates trends. ¹

Landscape Unit: a planning area, generally up to about 100,000 ha in size, delineated according to topographic or geographic features such as a watershed or series of watersheds. It is established by the district manager.

Measure: A set of variable that provides quantitative information about the status/standard established for an indicator.

Natural disturbance: the historic process of fire, insects, wind, landslides and other natural events in an area.

Non Commercial brush (NCBR): Describes potential productive forest land that is covered with either 'Forest' or 'Brush'.

Natural Disturbance Unit (NDU): These units separate areas based on differences in disturbance processes, stand development, and temporal and spatial landscape pattern.

NHLB: Non-Harvestable Land Base This is area not considered part of the THLB. This includes areas excluded from contributing to timber supply during the TSR process, such as parks, riparian reserve areas, inaccessible areas, inoperable areas, non-merchantable forest types, low productivity types, recreation features, and environmentally sensitive areas.

Old Growth Management Area (OGMA): areas which contain, or are managed to replace, specific structural old-growth attributes and which are mapped out and treated as special management areas.

Predictive Ecosystem Mapping (PEM): A computer, GIS and knowledge-based method that divides landscapes into ecologically-oriented map units for management purposes.

Recreation Opportunity Spectrum (ROS): a mix of outdoor settings based on remoteness, area size, and evidence of humans, which allows for a variety of recreation activities and experiences. The descriptions used to classify the settings are on a continuum and are described as: rural, roaded resource, semi-primitive motorized, semi-primitive non- motorized, and primitive.

Regeneration delay: the maximum time allowed in a prescription, between the start of harvesting in the area to which the prescription applies, and the earliest date by which the prescription requires a minimum number of acceptable well-spaced trees per hectare to be growing in that area.

Riparian: Area adjacent to a stream, river, lake or wetland. The FPC Riparian Management Area Guidebook defines it as "areas [that] occur next to the banks of streams, lakes, and wetlands and include both the area dominated by continuous high moisture content and the adjacent upland vegetation that exerts an influence on it".

Riparian Reserve Zone (RRZ): The portion of the riparian management area or lakeshore management area located adjacent to a stream, wetland or lake.

Seral: the stage of development of an ecosystem, from a disturbed, un-vegetated state (early-seral) to a mature plant community (late-seral).

Site Index: an expression of the forest site quality of a stand, at a specified age, based either on the site height, or on the top height, which is a more objective measure.

Snag: a standing dead tree, or part of a dead tree, found in various stages of decay—from recently dead to very decomposed.

Stream Crossing Quality Index: a field based hazard assessment of the potential for accelerated erosion and sediment delivery at stream crossings. The procedure evaluates and scores the potential for eroded sediment to reach the stream environment. A high score infers that there is a significant erosion problem which may in turn cause sediment related water quality problems.

Sustainable Forest Management (SFM): Management “to maintain and enhance the long-term health of forest ecosystems, while providing ecological, economic, social and cultural opportunities for the benefit of present and future generations”²

Target: A specific statement describing a desired future state or condition of measure. Targets should be clearly defined, time-limited and quantified, if possible.

Timber Harvesting Landbase (THLB): The area of the Defined Forest Area available for timber extraction.

Traditional Use Study (TUD): Compilation of data respecting historic use of the land and resources by First Nations

Executive Summary

Fort Nelson Defined Forest Area location

The Defined Forest Area (DFA) of the SFM Plan is the Fort Nelson Timber Supply Area (TSA) as described for the Timber Supply Review. The Fort Nelson DFA is located in the northeastern corner of British Columbia and covers approximately 9.8 million hectares, bordering Alberta to the east and the Northwest Territories and the Yukon Territory to the north. The Alaska Highway (Highway # 97) is the main access to the town of Fort Nelson and the only major service road within the DFA. The Alaska Highway leads travelers north from Dawson Creek, BC, through the Yukon to Fairbanks, Alaska. The 317 Road (Highway 77), so named because it begins 17 miles from Fort Nelson (Mile 300 on the Old Alaska Highway), is the only other year round road access to the Fort Nelson area, providing access to the Northwest Territories (source MOFR website).

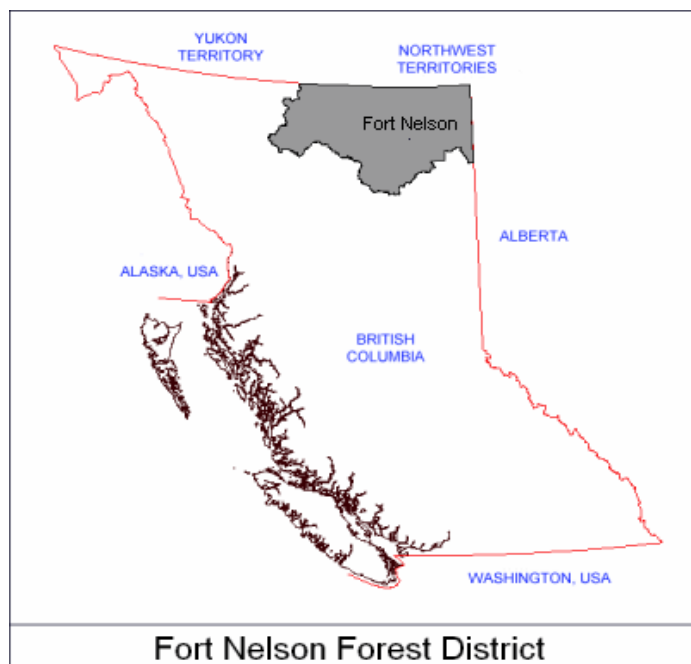

Figure 1: Fort Nelson Defined Forest Area

Purpose

This report is prepared as part of the annual assessment to confirm Canfor's continued implementation of the CSA SFM standard. This report is the eighth edition since registration to the CSA-Z809-02 standard in 2005 and provides a status from April 1, 2012 to March 31, 2013 of the locally developed measures of the SFMP. The SFM Annual Report target completion date is September 30th annually. In this report, each measure is re-iterated, and a brief status update is provided. For further reference to the intent of the measures, or the practices involved, the reader should refer to Canfor's Sustainable Forest Management Plan for the Fort Nelson DFA (SFMP, second edition April 1, 2011).

The development of an updated SFM Plan in conformance with the requirements of the CSA Z809-08 standard was concluded on April 1, 2011. This annual report will summarise performance under the indicators included in the revised SFMP second edition (April 1, 2011). Reporting for BC Timber Sales is provided in a separate report.

Circumstances affecting SFM process

Canfor Corporation announced on January 18th, 2008 that due to poor wood product markets, a high Canadian dollar and record low oriented strand board (OSB) prices, its PolarBoard OSB and Tackama plywood mills in Fort Nelson would be closing indefinitely. The Polarboard closure took effect once the existing inventories were utilized and finished products shipped, which occurred in early June 2008. On February 26th, 2008 it was announced that Canfor's Fort Nelson Tackama mill would continue operations, largely because of the efforts of the United Steel Workers Union, employees, suppliers, the provincial government and contractors to identify means to reduce costs at Tackama and establish a business case to keep Tackama operating. Through the contributions of the union, employees, contractors and suppliers and policy changes announced by the provincial government a business case was made to continue operations at Tackama. The business case was predicated upon

Tackama realizing the intended cost savings and continued positive performance of plywood markets. Although Tackama had performed very well and achieved record production targets, Canfor Corporation reassessed Tackama's situation and announced on October 8th, 2008 that due to the continued poor demand and low prices for plywood across North America, it would be closing indefinitely the Tackama plywood plant in Fort Nelson. The market conditions and future outlook for plywood prices were not encouraging, with no evidence of a turnaround in the near future and consequently Canfor decided to curtail production to address the reduced market demand. The indefinite shutdown of the Canfor mills continued throughout 2009/2010, 2010/2011, 2011/2012, 2012/2013 and is expected to continue through the next few reporting years. As of the date of completion of this report, the Canfor mills in Fort Nelson remain indefinitely closed.

The closure of the PolarBoard mill, followed later by the closure of the Tackama mill affects local forest management, the PRISM and Public Advisory Group in the following ways:

- Reduced and/or no operational harvesting activities affects reporting of certain measures, rendering reporting on current status of much of the indicators as static until resumption of harvest activity;
- Cessation of harvest activities reduces the economic benefit of forest management to the region;
- With the exception of the added meetings required to discuss revisions to the SFM plan, suspended harvesting activities has reduced the need to continue with frequent PAG meetings, resulting in reduced numbers of meetings and field tours;
- Difficulty in attracting new PAG members and promoting general interest in forestry in the community.

Overview of Canfor Achievements

For the 2012 reporting year the following list describes the results achieved:

- ✓ 45 of the 48 measures were achieved (93.8%),
- ✓ 2 measure is pending (4.2%),
- ✓ 1 of the indicator objectives were not met (2.0%).

The overview of target achievements in this section captures Canfor's performance measures. BC Timber Sales is responsible for reporting their achievements through their Annual Report. Figure 2 below compares the 2012 measure achievement to previous reporting periods and Table 1 shows the status of each individual measure. Very similar indicator performance for the 2012 reporting year is noticeable, with respect to the number of indicators either pending or not achieved. Measures that were not met will be discussed during the upcoming Management Review and actions will be identified that should result in improving trends.

With the shutdown of the Canfor mills in Fort Nelson, no Canfor harvest activities took place in 2012. As a result, many measures directly linked to harvest activities do not contain new data and those often refer to the 2008 data (last year of harvesting activities) instead. It is anticipated that the upcoming 2013 Annual Report will continue to provide minimal new reporting of measures that are directly influenced by harvest activities. Table 1 identifies the measures that will receive minimal reporting and are recommended to be deferred for full reporting until harvesting activities resume.

Summary of 2012 Measures Performance

Figure 2: Comparison of measure achievement Canfor 2005 to 2012

Table 1: Summary of Canfor's 2012 Measure Status

Measure		Target Met	Target Pending	Target Not Met	Minimal reporting
1.1.1	Ecosystem area by type	√			√
1.1.2	Forest area by type or species	√			√
1.1.3	Forest area by seral stage or age class	√			√
1.1.4.1	Degree of within stand structural retention – WTP Percentage	√			√
1.1.4.2	Degree of within stand structural retention – Dispersed Retention	√			√
1.1.4.3	Degree of within stand structural retention – Riparian Management	√			√
1.1.5	Shrub Habitat	√			√
1.2.1 and 1.2.3	Degree of habitat protection for selected focal species including species at risk and degree of suitable habitat in the Proportion of regeneration comprised of native species	√			√
1.3.1	Percentage of stands artificially regenerated that are free of genetically modified organisms (GMOs)	√			
1.4.1	Proportion of identified sites with implemented management strategies	√			
1.4.2	Protection of identified sacred and culturally important sites	√			
2.1.1.1	Reforestation success – Regen Delay	√			
2.1.1.2	Reforestation success – Free Growing	√			
2.1.1.3	Percentage of silviculture obligation areas with significant detected forest health damaging agents which have	√			
2.1.1.4	Evidence of efforts being made to manage known significant forest health damaging agents	√			
2.2.1	Additions and deletions to the forest area	√			√
2.2.2	Proportion of long term sustainable harvest that is actually harvested		√		√
3.1.1	Level of soil disturbance	√			√
3.1.2	Level of downed woody debris	√			√
3.2.1.1	Proportion of watershed or water management areas with recent stand replacing disturbance - Watersheds	√			√
3.2.1.2	Proportion of watershed or water management areas with recent stand replacing disturbance – Roads and road structures	√			√
4.1.1.1	Net carbon uptake – Total Carbon Storage	√			√
4.1.1.2	Net carbon uptake – Sequestration rate	√			√
4.1.2	Reforestation success – Covered by indicator 2.1.1	√			
4.2.1.1	Addition and deletions to forest area – Covered by indicator 2.2.1	√			√
4.2.1.2	Evidence of best efforts to coordinate forest management activities with the oil and gas industry	√			
5.1.1.1	Quantity and quality of timber and non-timber benefits, products and services in the DFA – Timber – Covered by indicator 2.2.2		√		√
5.1.1.2	Quantity and quality of timber and non-timber benefits, products and services in the DFA – Non-timber	√			
5.1.1.3	Participants forest management activities will not negatively impact established recreational sites and trails	√			√
5.1.1.4	Forest management activities will be consistent with Visual Quality Objectives (VQO's)	√			√
5.2.1.1	Level of investment in initiatives that contribute to community sustainability	√			√
5.2.1.2	Amount of stumpage paid in the Fort Nelson TSA	√			√
5.2.2	Level of investment in training and skills development	√			
5.2.3	Level of direct and indirect employment	√			
5.2.4	Level of aboriginal participation in the forest economy	√			
6.1.1	Evidence of good understanding of the nature of aboriginal title and rights	√			
6.1.2	Evidence of best efforts to obtain acceptance of management Plans based on Aboriginal communities having a clear understanding of the plans	√			
6.1.3	Level of management and/or protection of areas where culturally important practices and activities (hunting/fishing/gathering) occur	√			
6.2.1	Evidence of understanding and use of Aboriginal knowledge through the engagement of willing Aboriginal communities using a process that identifies and manages culturally important resources and values	√			
6.3.1	Evidence that the organization has cooperated with other forest dependent businesses, forest users and the local community to strengthen and diversify the local economy.	√			
6.3.2	Evidence of cooperation with DFA related workers to enhance safety standards, procedures and outcomes in all DFA workplaces and affected communities	√			
6.3.3	Evidence that a worker safety program has been implemented and is periodically reviewed and improved	√			
6.4.1	Level of participant and Prism member satisfaction with the public participation process	√			
6.4.2	Evidence of efforts to promote capacity development and meaningful participation in general	√			
6.4.3	Evidence of efforts to promote capacity development and meaningful participation for Aboriginal communities – Covered by indicator 6.1.2	√			
6.5.1	Number of People reached through educational outreach			√	
6.5.2	Availability of summary information on issues of concern to the public	√			
Total		45	2	1	

Continuous Improvement

To facilitate reporting and continuous improvement of the measures and targets in the SFM Plan, and to ensure that data is collected in a timely and orderly fashion, each measure will be recorded and tracked. This will occur either in Canfor's Cengea Environment' module or in a separate database specific to the measure. CENGEA acts like a warehouse for most SFM tasks, tracking responsibilities, due dates, and progress comments.

Detailed Review of SFM Measure Performance

Criterion 1.0 Biological Diversity

1-1.1 - Ecosystem area by type

Measure 1-1.1	
Target	Results
Based on a percent representation of ecosystem groups across the DFA:	Canfor did not complete any harvesting or road construction during the reporting period. Therefore no activities were completed involving rare or uncommon ecosystems. This indicator is therefore considered to be achieved.
A) 100% of the rare and uncommon ecosystems will have special management strategies associated with them (0%)	
B) 100% of the strategies for rare and uncommon ecosystems will be followed.	

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
The ecosystem representation analysis for the Fort Nelson DFA was updated in 2011/12. Prior to resumption of harvest activities the management strategies currently identified for rare and uncommon ecosystems will be updated to be consistent with the revised 2011/12 ERA.

References
Table 5: Rare and Uncommon Ecosystems in the Fort Nelson DFA in Appendix 2 – Criterion 1 Supporting Data the baseline data identified the SFMP. This analysis was completed on the NHLB which far exceeds the THLB in area. Those ecosystems found to be uncommon or rare in the NHLB will be subject to specific management s where they occur in the THLB.

1-1.2 – Forest area by type and species

Measure 1-1.2	
Target	Results
Percent distribution of Forest type (treed conifer, treed broadleaf, treed mixed) >20 years old across the DFA. Target is to maintain baseline ranges and distribution in the future (5%)	Canfor was not actively harvesting or constructing roads during the reporting period. Accordingly, there was no effect on the forest type distribution. This indicator is considered met due to zero net effect on the indicator.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References
See Table 6: Forest Cover Type in Appendix 2 – Criterion 1 Supporting Data for a summary of the baseline data supporting this indicator.

Figure 3: Deciduous, conifer and mixed wood forest stands.

1-1.3 – Forest area by Seral stage or age class

Measure 1-1.3	
Target	Results
Percent of late seral stage (old growth) distribution by natural disturbance unit is maintained at the legal target for old growth as set by the Non-Spatial Old Growth Objectives of the Fort Nelson Forest District Order (NSLBOO) and spatially established OGMA's or to trend positive each year toward meeting the legal target.%)	Canfor was not actively harvesting or constructing road during the reporting period. Accordingly there was no effect on the late seral stage forest distribution across the DFA. This indicator is considered met due to zero net effect on the indicator.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References
See Table 7: Required Percentage of Retention in the DFA, Figure 6: Natural Disturbance Units of the Fort Nelson DFA and Table 8: Current Percentage of Old Seral Stage by NDU in Appendix 2 – Criterion 1 Supporting Data for a summary of the data from the SFMP.

1-1.4.1 - Degree of within stand structural retention – WTP percentage

Measure 1-1.4.1	
Target	Results
Percent of within stand structure retained across the DFA in harvested areas:	Canfor completed no harvesting activities in the reporting period. No harvesting occurred since the calculation of the 2010 baseline data for the 2011 SFMP. Accordingly, there was no effect on the percentage of WTP retention within the DFA and the trend was unaffected as well. This indicator is considered met due to zero net effect on the target.
A) 100% conformance with landscape level (LU) target of 7% set by FRPA for all new harvesting (0%)	
B) positive trend toward the baseline 7% in LU's where current level of retention is deficient	

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
The Canfor Forest Stewardship Plan (FSP) WTP retention target was amended in 2012 to be consistent with the target noted in the SFMP.

References
See Table 9: Current Stand Level Retention Percentage in Appendix 2 – Criterion 1 Supporting Data for a summary of the baseline data from the SFMP

1-1.4.2 – Degree of within stand structural retention – Dispersed Retention

Measure 1-1.4.2	
Target	Results
Percent of blocks meeting dispersed retention levels as prescribed in the site/logging plan, target of 100% (0%)	Canfor completed no harvesting activities during the reporting period. Accordingly there was no effect on the indicator target. This indicator is considered met due to zero net effect on the target.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

1-1.4.3 – Degree of within stand structural retention – Riparian management

Measure 1-1.4.3	
Target	Results
Number of non-conformances where forest operations are not consistent with riparian management requirements as identified in operational plans, target of 0 non conformances. (Variance of 0)	Canfor completed no harvesting activities during the reporting period. Accordingly, there were no non-conformances with riparian management requirements in operational plans. This indicator is considered met due to zero net effect on the target.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

1-1.5 – Shrub Habitat

Measure 1-1.5		
Target	Results	
A) Sustain current baseline shrub habitat percentage in the THLB (5%)	Canfor completed no harvesting or road construction activities during the reporting period therefore our forest activities had no effect on the shrub percentage in the THLB. This target is considered met due to zero net effect on the target.	
B) Monitor shrub habitat percentage in the NHLB		
Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References
See Table 10: Area in Stands Less than 20 Years Old and Polygons labeled as Shrub Area and Table 11: Areas in Stands with the Label NPBr in Appendix 2 – Criterion 1 Supporting Data for a summary of the supporting this indicator.

- 1-2.1 – Degree of Habitat protection for selected focal species including species at risk, and**
- 1-2.2 – Degree of suitable habitat in the long term for selected focal species including species at risk.**

Measure 1-2.1 and 1-2.2		
Target	Results	
Percentage of forest management activities consistent with management strategies for species of management concern, target of 100% conformance with management strategies. (Variance of 0).	Canfor completed no harvesting or road construction activities during the reporting period therefore no activities took place that would have the potential to impact a species of management concern. This target is considered met due to zero net effect on the target.	

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

1-2.3 - Proportion of regeneration comprised of native species

Measure 1-2.3	
Target	Results
Regeneration will be consistent with provincial regulation and standards for seed and vegetative material use. Target of 100% conformance with standards (0).	Canfor's planting activities during the reporting period were in conformance with the Chief Forester's Standards for Seed Use. Seedlings were planted from local seed collected in Fort Nelson in accordance with the Chief Forester's Standards for Seed Use This target has been met.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

1-3.1 - Percentage of stands artificially regenerated that are free from genetically modified organisms (GMO's)

Measure 1-3.1	
Target	Results
100 percent of stands artificially reforested by participants will be free of GMO's. (Variance of 0%).	Canfor's planting activities during the reporting period were in conformance with the Chief Forester's Standards for Seed Use. All blocks were planted with seedlings grown from locally harvested seed as mentioned in indicator 1.2.3. No genetically modified organisms were used to reforest any areas in the DFA. This target has been met

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References
•

1-4.1 - Proportion of identified sites with implemented management strategies

Measure 1-4.1	
Target	Results
100 percent of forest management activities consistent with management strategies for protected areas and sites of biological significance (Variance of 0%)	Canfor completed no harvesting or road construction activities during the reporting period therefore no activities took place that would have the potential to impact protected areas or sites of biological significance. Silviculture activities were consistent with operational plans. This indicator is considered met due to zero impact on the target.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
The indicator target and variance includes sites of cultural significance made known to the participants by First Nations and other parties.

References

1-4.2 - Protection of identified sacred and culturally important sites

Measure 1-4.2	
Target	Results
100 percent of identified Aboriginal forest values, knowledge and uses considered in forestry planning processes (0).	Canfor completed no harvesting or road construction activities during the reporting period, accordingly no activities took place that would have the potential to impact identified sacred or culturally important sites. No sites of significance to first nations to be addressed by planning processes were brought forward to Canfor during this reporting period. This indicator is considered met due to zero harvesting activities having occurred.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Inherent in the SFMP description of this indicator is the understanding that the consideration of Aboriginal forest values, knowledge and uses in forestry planning also includes addressing the protection of these items and known sites of cultural importance to First Nations.

References

Criterion 2.0 Ecosystem Condition and Productivity

2-1.1.1 - Reforestation success – Regen Delay

Measure 2-1.1.1	
Target	Results
100 percent of stands established annually will have an average regeneration delay of 3 years or less (variance Site Plan specific)	No stands were due to be established in 2012. In fact no stands were established in the last 4 years. Fill planting of previously established stands occurred in 2012 to maintain stocking within target thresholds. This target has been met.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
The regen delay period was extended for a portion of 3 blocks requiring fill planting.

References
See Appendix 3 Table 13.

2-1.1.2 - Reforestation success – Free Growing

Measure 2-1.1.2	
Target	Results
100 percent compliance with free growing timelines prescribed in site plans (0)	100% of all blocks required to be free growing in 2012 achieved free growing status and were declared as free growing. The indicator target is therefore achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
The late free growing date was extended for a small number of blocks experiencing reforestation challenges. The late free growing dates were amended prior to expiry of the original late free growing date.

References
See Appendix 3 Table 12.

2-1.1.3 - Percentage of silviculture obligation areas with significant detected forest health damaging agents which have treatment plans

Measure 2-1.1.3	
Target	Results
100 Percent of sites with significant forest health damaging agents will have a treatment plan developed and initiated within one year of detection (0)	All blocks found to have a significant forest health damaging agent that threatens the survival of the stand have had treatment plans developed. The most significant damaging agent found in blocks surveyed in 2012 was competing vegetation. These blocks have been scheduled for vegetation management and/or fill planting treatments. This indicator target has been achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Wildfires in the Kotcho area destroyed a number of Canfor's plantations in 2012. Action plans have been developed to deal with reforesting these areas.

References
•

2-1.1.4 - Evidence of efforts being made to manage known significant forest health damaging agents

Measure 2-1.1.4	
Target	Results
a) Annually report out on percentage of harvest activity that is focused on the treatment of stands damaged by or susceptible to damage by natural events or damaging agents	Canfor completed no harvesting or road construction activities during the reporting period, accordingly no harvest salvage or sanitation activities took place that would have the potential to impact significant forest health damaging agents. Canfor has implemented brushing activities where required. Canfor staff were members of the Fort Nelson Mountain Pine Beetle Task Force during the reporting period. Therefore, this indicator is considered to have been met.
b) Annually report out on participation in management efforts within the DFA (committees, Task Forces, etc.) for significant forest health damaging agents	

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

2-2.1 - Additions and deletions to the forest area

Measure 2-2.1

Target	Results
Report out the percentage of gross forested landbase (CFLB) in the DFA converted to non-forest land use through forest management activities. Target of less than 3% of the gross forested landbase at any given time (variance of 0%).	Canfor completed no harvesting or road construction activities during the reporting period, accordingly no activities took place that converted forest land to non forest land use. This indicator target is considered achieved.

Target Met

✓ Yes	No	Pending
-------	----	---------

Recommendations and Next Steps

None at this point.

References

See Appendix 3 Table 15.

2-2.2 - Proportion of long term sustainable harvest level that is actually harvested

Measure 2-2.2

Target	Results
Percentage of volume harvested compared to the long term harvest level (AAC) with a target of 100 percent over 5 years (10%)	Canfor completed no harvesting or road construction activities during the reporting period. This indicator target is considered pending.

Target Met

Yes	No	✓ Pending
-----	----	-----------

Recommendations and Next Steps

The PRISM has agreed that reporting of the Participants performance for this indicator will be waived pending the resumption of timber harvesting by the Participants within the DFA.

References

--

Criterion 3.0 Soil and Water

3-1.1 - Level of soil disturbance

Measure 3-1.1	
Target	Results
Percentage of harvested blocks meeting soil disturbance objectives identified in plans. Target of 100 percent (variance of 0%)	Canfor completed no harvesting, mechanical site preparation or road construction activities during the reporting period. Therefore no negative soil disturbance was created. This indicator target is considered achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

3-1.2 - Level of Downed woody debris

Measure 3-1.2	
Target	Results
Percent of cutblocks reviewed where post harvest coarse woody debris (CWD) levels are within the targets contained in plans. Target of 100% (10)	Canfor completed no harvesting or road construction activities during the reporting period. Therefore the population of blocks required to meet the target was zero. This indicator target is considered achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

3-2.1.1 - Proportion of watersheds or water management areas with recent stand replacing disturbance – Watersheds

Measure 3-2.1.1	
Target	Results
Sensitive watersheds that are found to be above peak flow targets will have further assessment done and strategies created for water management prior to harvest within the watershed. Target of 100 percent (0)	Canfor completed no harvesting or road construction activities during the reporting period. Therefore no harvesting occurred in sensitive watersheds. This indicator target is considered achieved

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Watersheds within the DFA will be analyzed to create a baseline of information identifying sensitive watersheds. The Interior Watershed Assessment procedures Guidebook and the advice of hydrologists will be considered in the analysis. This analysis will be completed prior to resumption of harvest activities.

References

3-2.1.2 - Proportion of watersheds with recent stand replacing disturbance – Roads and Structures

Measure 3-2.1.2	
Target	Results
Percentage of high hazard drainage structures on road permits in sensitive watersheds with identified water quality concerns that have mitigative strategies implemented. Target of 100 (0)	Canfor completed no harvesting or road construction activities during the reporting period. Therefore no harvesting occurred in sensitive watershed. This indicator target is considered achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Prior to resumption of harvest activities, an analysis will be conducted to identify sensitive watersheds within the Fort Nelson DFA. Harvesting conducted in sensitive watersheds utilizing roads held under permit by Canfor will be targeted for assessment of drainage structures as identified in the SFMP, to identify stream crossings considered to be of high potential hazard for sediment delivery to fish bearing streams. Mitigation strategies will be developed for high sedimentation hazard crossing structures.

Criterion 4.0 Role in Global Ecological Cycles

4-1.1.1 - Net carbon uptake – Total Carbon Storage

Measure 4-1.1.1	
Target	Results
Maintain or increase the CFS-CBM derived baseline of 1,752 mega-tonnes total ecosystem carbon on the productive CFLB (10%)	The total carbon storage for the Fort Nelson DFA was calculated in 2006 and came out to 1,752 MT of carbon in the DFA. This indicator is considered met as the data from the initial run is still the baseline and believed to be applicable. See Table 17: Summary of ecosystem carbon storage in the forested landbase over a 250 year period in Appendix 4 – Criterion 4 Supporting Data for a summary of the data from the FESL report.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
This data is tied to inputs from the Timber Supply Review (TSR). The next run of the model will be completed in conjunction with the anticipated 2016 TSR. Should new carbon storage data for the DFA become available prior to the TSR, it will be presented within the reporting year report when it was released. The lack of harvesting and road building activities by Canfor has resulted in no reductions in Carbon storage resulting from Canfor's forest management activities.

References
See Table 17: Summary of ecosystem carbon storage in the forested landbase over a 250 year period in Appendix 4 – Criterion 4 Supporting Data for a summary of the data from the carbon analysis report.

4-1.1.2 - Net carbon uptake – Sequestration rate

Measure 4-1.1.2	
Target	Results
Maintain or increase the CFS-CBM derived baseline sequestration rate of 0.93 MT carbon per year in the THLB and 0.55 MT carbon per year in the NHLB (10%)	The annual carbon sequestration rate for the Fort Nelson DFA was calculated in 2006 and came out to 0.93 MT per year in the THLB and 0.55 MT per year in the NHLB. This indicator is considered met as the data from the initial run is still the baseline and believed to be applicable.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
This data is tied to inputs from the Timber Supply Review (TSR). The next run of the model will be completed in conjunction with the 2016 TSR. Should new carbon sequestration rate data for the DFA become available prior to the TSR, it would be presented within the reporting year report when it was released. Canfor’s reforestation activities have contributed to maintaining and / or increasing the Carbon sequestration rate.

References
See Table 18: Average carbon sequestration rate in the forested landbase over a 250 year period in Appendix 4 – Criterion 4 Supporting Data for a summary of the data from the carbon analysis report.

4-1.2 – Reforestation Success

Measure 4-1.2	
Target	Results
Average regeneration delay for stands established annually will be 3 years or less (Variance site plan specific).	No stands were established in the last 4 years, as no harvesting has occurred since 2008. Fill planting of previously established stands occurred in 2012 to maintain stocking within target thresholds. This target has been met

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Block stocking will continue to be monitored and fill planting completed where required to maintain stocking within target thresholds.

References
•

4-2.1.1 - Addition and deletions to the forest area

Measure 4-2.1.1	
Target	Results
Percent of gross forested landbase in the DFA converted to non-forest land use through forest management activities. Target of less than 3% of gross forested landbase at any given time (0).	Canfor completed no harvesting or road construction activities during the reporting period, accordingly no activities took place that converted forest land to non forest land use. This indicator target is considered achieved

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

4-2.1.2 - Evidence of best efforts to coordinate forest management activities with the oil and gas industry

Measure 4-2.1.2	
Target	Results
Share 100% of annual planned block and road construction with the Oil and Gas Commission (0)	Canfor completed no harvesting or road construction activities during the reporting period, nor did Canfor complete any harvest planning activities. Accordingly, there was no annual operating plan to share with the OGC. This indicator target is considered achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Prior to resumption of harvest activities, Canfor will share it's annual harvest plan with the Oil and Gas Commission. Canfor continues to comment on oil and gas project referrals received. During 2012 Canfor received and responded to 18 oil and gas project referrals.

References
A risk assessment of the impact of oil and gas activities on SFM targets was completed in 2012. See analysis

Criterion 5.0 Economic and Social Benefits

5-1.1.1 - Quantity and quality of timber and non-timber benefits, products and services produced in the DFA - Timber

Measure 5-1.1.1	
Target	Results
Proportion of the long term sustainable harvest level that is actually harvested. Percentage of volume harvested annually compared to long term harvest level (AAC) with a target of 100 percent over 5 years (0)	Canfor completed no harvesting or road construction activities during the reporting period. This indicator target is considered pending.

Target Met		
Yes	No	✓ Pending

Recommendations and Next Steps
The PRISM has agreed that reporting of the Participants performance for this indicator will be waived pending the resumption of timber harvesting by the Participants within the DFA.

References
•

Figure 4: Canfor Polarboard OSB mill circa 2003.

5-1.1.2 - Quantity and quality of timber and non-timber benefits, products and services provided in the DFA – Non-Timber

Measure 5-1.1.2	
Target	Results
Conformance with strategies for non-timber benefits identified in plans. Target of 100 percent compliance (0).	Canfor completed no harvesting or road construction activities during the reporting period. As such no plans were implemented that required strategies for provision of non-timber benefits. This indicator target is considered met.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps

5-1.1.3 - Participants forest management activities will not negatively impact established recreational sites and trails

Measure 5-1.1.3	
Target	Results
100 percent of Participants road building and harvesting activities will take place outside of established recreation sites and trails. A variance is allowed in the event there is a compelling forest health or safety concern and that appropriate permissions are obtained.	Canfor completed no harvesting or road construction activities during the reporting period. As such there was no potential or actual impact to established recreation sites and trails. The indicator is considered achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
A variance, if required, would be requested from the appropriate designated decision maker.

References
See Table 19: Recreation sites and trails in the Fort Nelson DFA in Appendix 5 – Criterion 5 Supporting Data for a summary of Recreation sites and trails identified in the SFMP.

5-1.1.4 - Forest management activities will be consistent with Visual Quality Objectives (VQOs)

Measure 5-1.1.4	
Target	Results
100 percent of Participants forest operations will be consistent with the established VQOs for the Fort Nelson DFA. A variance is allowed in the event there is a compelling forest health or safety concern, and the appropriate permissions are obtained.	Canfor completed no harvesting or road construction activities during the reporting period. As such there was no potential or actual impact to established VQOs. The indicator is considered achieved. .

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
A variance, if required, would be requested from the appropriate designated decision maker.

References
See Figure 8: Fort Nelson Visual Quality Objectives, Table 20: Visual Quality Objective Class, Table 21: Maximum Allowable Disturbance Percentage by VQO Class, Table 22: Percent Denudation for Established VQOs in Appendix 5 – Criterion 5 Supporting Data, for a summary of the background data from the 2011 SFMP.

5-2.1.1 - Levels of investment in initiatives that contribute to community sustainability

Measure 5-2.1.1	
Target	Results
Percent of total budget spent in local communities on a 5 year rolling average. This will be a report out indicator until the PAG decides on an acceptable target and variance. Annual expenditures will also be reported out in this indicator	Of Canfor’s 2012 planning budget for Fort Nelson 17.1% (\$10,966) was spent on local suppliers. Of Canfor’s 2012 silviculture budget 50.8% (\$1,189,795) was spent on local suppliers. Of Canfor’s 2012 road maintenance budget 98.9% was spent on local suppliers. Overall, 51.2% of Canfor’s 2012 budget was spent on local suppliers.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References
See Appendix 5 Table 26.

5-2.1.2 - Amount of stumpage paid in the Fort Nelson DFA

Measure 5-2.1.2		
Target	Results	
This is a report out indicator requested by the Public Advisory Group to show what revenues are being generated by the forest resource (timber extraction) in the DFA. As such there is no target or variance associated with it.	Canfor completed no harvesting or road construction activities during the reporting period. As such there was no stumpage charged and none paid in the reporting period. The indicator is considered to have been achieved.	
Target Met		
✓ Yes	No	Pending
Recommendations and Next Steps		
None at this point.		
References

5-2.2 - Level of investment in training and skills development

Measure 5-2.2		
Target	Results	
Training in environmental and safety procedures in compliance with company training plans. Target of 100 percent of company employees will have both environmental and safety training (5).	In 2012 Canfor had 4 woodlands employees with duties in Fort Nelson. All 4 employees received required safety and environmental training. This indicator target is considered to have been met.	
Target Met		
✓ Yes	No	Pending
Recommendations and Next Steps		
None at this point.		
References		

5-2.3 - Level of direct and indirect employment

Measure 5-2.3	
Target	Results
Maintain current level of direct and indirect employment as expressed as a factor of current harvest level (or using indirect job multipliers derived from the last TSR (variance of 10%)	During the reporting period Canfor had a total of 18 staff assigned to Fort Nelson duties. The TSR employment multiplier of 1.25 yields a total of 22.5 direct and indirect jobs. This indicator target is considered to have been achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
With the sale of Canfor’s panel manufacturing equipment in the spring of 2013, the 14 manufacturing staff assigned to Canfor Fort Nelson had their employment with the Company terminated. As of the writing of this report, Canfor has no manufacturing staff in Fort Nelson. At the time of preparation of this report Canfor has 4 employees (Woodlands) with duties in Fort Nelson.

References

5-2.4 - Level of Aboriginal participation in the forest economy

Measure 5-2.4	
Target	Results
Number of opportunities compared to the three year rolling average. There will be no set target for this indicator as the objective is to ensure that some opportunities are being made available to first nations within the DFA. No variance is prescribed with this indicator	Canfor maintained 1 MOU with Prophet River First Nation. The provisions of the MOU are considered “on hold” until harvest operations resume by Canfor. Canfor did not tender any contracts for work in Fort Nelson in 2012. As this is a report out indicator it is considered to have been met. .

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

6-1.1 - Evidence of good understanding of the nature of Aboriginal title and rights

Measure 6-1.1	
Target	Results
100% of Canfor Forest Management Group (Fort Nelson Woodlands) employees and 100% of all BCTS Fort Nelson Field Team staff will receive First Nations awareness training (variance of 0%)	Canfor’s Fort Nelson Woodlands employees received First Nations awareness training. This indicator is considered to have been achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Canfor’s aboriginal awareness training module was placed on the Eclipse training website in the form of a self administered training module in 2012.

References

6-1.2 - Evidence of best efforts to obtain acceptance of management plans based on Aboriginal communities having a clear understanding of the plans

Measure 6-1.2	
Target	Results
100% of management plans exhibit evidence of best efforts to obtain acceptance by aboriginal communities	During the reporting period no harvesting plans were developed. Notice of Intent to Treat were shared with affected First Nations (Prophet River, Fort Nelson and Fort Liard) and invited to meet with Canfor reps to review the plans. Prophet River FN accepted the offer to discuss the plan and provided comment. This indicator is considered to have been met.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps

6-1.3 - Level of Management and/or Protection of areas where culturally important practices and activities (hunting, fishing, gathering) occur

Measure 6-1.3	
Target	Results
100 percent of forest operations in conformance with operational / site plans developed to address Aboriginal forest values, knowledge and uses (variance of 0)	Canfor completed no harvesting or road construction activities during the reporting period. Canfor’s brushing activities were completed in conformance with site plans & comments received in response to the Pesticide Management Plan (PMP). The indicator is achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
None at this point.

References

6-2.1 - Evidence of understanding and use of Aboriginal knowledge through the engagement of willing Aboriginal communities, using a process that identifies and manages culturally important resources and values

Measure 6-2.1	
Target	Results
100 percent of identified Aboriginal forest values and uses considered in the forestry planning process	Canfor did not propose or complete any harvesting or road construction activities during the reporting period. Canfor’s brushing activities were completed in conformance with site plans and comments received from First Nations in response to the PMP. The indicator is achieved.

Target Met		
✓ Yes	No	Pending

Recommendations and Next Steps
Inherent in the SFMP description of this indicator is the understanding that the consideration of Aboriginal forest values and uses in forestry planning includes addressing the protection of these items in forest plans.

Measure 6-5.1	
Target	Results
50 or greater people to whom educational opportunities have been offered (variance of -10 people)	<p>Following is a summary of the Participants' educational outreach activities and the attendance:</p> <ul style="list-style-type: none"> • June 23, 2012 Field trip – 4 people • May 2012 Trade Show – 16 people (about 8 each day of approx 3000 total attendance) • September 27, 2012 PRISM Meeting – 4 people • March 14, 2013 PRISM Meeting – 5 people • 2011 SFM Annual report - submitted to Fort Nelson public library (unsure of number of people reached) <p>Total People reached via educational outreach – <u>29+ people</u></p> <p>As total is not within the 10 person variance, this indicator is considered to have not been met</p>

Target Met		
Yes	✓ No	Pending

Recommendations and Next Steps
None at this point.

PRISM Field Tour June 2012

6-5.2 - Availability of summary information on issues of concern to the public

Measure 6-5.2

Target	Results
Previous years' annual report must be made available to the public via the web prior to March 31 st of the current reporting year (no variance).	Canfor posted the 2011 annual report to it's external website. The 2011 SFM annual report was submitted to the Fort Nelson public library. This indicator has been met.

Target Met

✓ Yes	No	Pending
-------	----	---------

Recommendations and Next Steps

The 2012 SFM annual report will be posted to Canfor's external website and a copy will be provided to the Fort Nelson public library.

References

Appendix 1 – SFMP Change Tables

Table 2: Summary of Changes to Criteria from the 2004 SFMP to the 2011 SFMP

Table 3: Summary of changes from 2004 Measures to 2011 Indicators

Table 4: Dropped Measures from the Amended 2004 SFMP

Table 2: Summary of Changes to Criteria from the 2004 SFMP to the 2011 SFMP

2004 Criteria	CSA Z809-08 Criteria
C1 Biological richness and its associated values are sustained in the defined forest area (DFA)	C1 Biological diversity
C 2. The productive capability of forest ecosystems within the Timber Harvesting Land Base (THLB) are sustained	C2 Ecosystem Condition and Productivity
C 3. Forest ecosystem contributions to global ecological cycles are sustained within the DFA	C3 Soil and Water
C 4. The flow of economic benefits from forests through the forest industry is sustained	C4 Role in Global Ecological Cycles
C 5. The flow of marketed non-timber economic benefits from forests is sustained	C5 Economic and Social Benefits
C 6. Forest management contributes to a diversified local economy	C6 Society's responsibility
C 7. Decisions guiding forest management on the DFA are informed by and respond to a wide range of social and cultural values	
C 8. Forest management sustains or enhances the cultural (material and economic), health (physical and spiritual) and capacity benefits that First Nations derive from forest resources	
C 9. Forest management sustains ongoing opportunities for a range of quality of life benefits	

Table 3: Summary of changes from 2004 Measures to 2011 Indicators

CSA Z809-08 Core indicator or Local Indicator	Measure replaced from the 2008 update of the 2004 plan
1.1.1 Ecosystem area by type	1-1.1 Ecosystem Representation
1.1.2 Forest area by type or species composition	1-2.1 Habitat elements
1.1.3 Forest area by seral stage or age class	1-1.2 Seral stage
1.1.4.1 Degree of within stand structural retention – WTP percentage	1-2.1 Habitat elements
1.1.4.2 Degree of within stand structural retention – Dispersed Retention	1-2.1 Habitat elements
1.1.4.3 Degree of within stand structural retention – Riparian Management	1-2.1 Habitat elements
1.1.5 Shrub Habitat	1-2.1 Habitat elements
1.2.1 Degree of habitat protection for focal species including species at risk	1-3.1 Vertebrate species populations 1-3.2 SAR management strategies 1-4.1 Operations in parks, reserves and PA's 1-4.2 Special sites of biological significance 1-4.3 Management activities consistent with the Muskwa-Kechika management area 1-4.4 Management activities consistent with legal objectives
1.2.2 Degree of suitable habitat in the long term for selected focal species including species at risk	1-2.1 Habitat elements 1-3.1 Vertebrate species populations 1-4.1 Operations in parks, reserves and protected areas 1-4.2 Special sites of biological significance 1-4.3 Management activities consistent with the Muskwa-Kechika management area 1-4.4 Management activities consistent with legal objectives
1.2.3 Proportion of regeneration comprised of native species	1-6.1 Conifer seed use in accordance with regulation 1-6.2 Aspen regeneration – Natural regeneration
1.3.1 Percentage of stands artificially regenerated that are free of genetically modified organisms	New Measure with no equivalent from the older plans
1.4.1 Proportion of identified sites with implemented management strategies	1-4.1 Operations in parks, reserves and protected areas 1-4.2 Special site of biological significance 1-4.4 Management activities consistent with legal objectives 9-3.1 compliance with documented strategies
1.4.2 Protection of identified sacred and culturally important sites	8-2.1 Percentage of specific/confirmed culturally important sites identified by first nations
2.1.1.1 Reforestation success – Regen Delay	2-3.1 Regeneration delay 2-3.2 Compliance with regeneration standards
2.1.1.2 Reforestation success – Free Growing	2-3.3 Compliance with free growing

CSA Z809-08 Core indicator or Local Indicator	Measure replaced from the 2008 update of the 2004 plan
2.1.1.3 Percentage of silviculture obligation areas with significant detected forest health agents which have treatment plans	4-6.2 Management strategies for damaging events or agents
2.1.1.4 Evidence of efforts being made to manage known significant forest health damaging agents	4-6.1 Assessment of damaging events or agents
2.2.1 Addition and deletions to the forest area	2-2.1 forest converted to non-forest use 2-2.3 Landslides
2.2.2 Percentage of long term sustainable harvest level that is actually harvested	4-1.1 Harvested Volume 4-1.2 Timber supply certainty
3.1.1 Level of Soil disturbance	2.-2.2 Long term detrimental soil disturbance
3.1.2 Level of downed woody debris	1-2.1 Habitat elements 2-1.2 Coarse woody debris
3.2.1.1 Proportion of watershed or water management areas with recent stand replacing disturbance - Watersheds	1-5.1 Stream crossings – WQCR 1-5.2 Stream crossings – installed/removed to design/standard 1-5.3 Stream crossings - inspections
3.2.1.2 Proportion of watershed or water management areas with recent stand replacing disturbance - Roads	1-5.1 Stream crossings – WQCR 1-5.2 Stream crossings – installed/removed to design/standard 1-5.3 Stream crossings - inspections
4.1.1.1 Net Carbon Uptake – Total Carbon Storage	3-1.1 Carbon stored in trees and non-tree vegetation Note this measure was pulled directly across
4.1.1.2 Net Carbon Uptake – Carbon sequestration rate	3-3.1 Carbon Sequestration Note this measure was pulled directly across
4.1.2 Reforestation success	As per indicator 2.1.1
4.2.1.1 Additions and deletions from to the forest area	As per indicator 2.2.1
4.2.1.2 Evidence of best efforts to coordinate forest management activities with the oil and gas industry	2-2.4 Information requests – oil and gas industry
5.1.1.1 Quantity and Quality of timber and non-timber benefits, products and services produced in the DFA	As per indicator 2.2.2
5.1.1.2 Quantity and Quality of timber and non-timber benefits, products and services produced in the DFA	5-1.1 Potential for marketed non-timber resource benefits 5-1.2 Amount of marketed non-timber resource activity
5.1.1.3 Participants forest management activities will not negatively impact established recreational sites and trails	9-1.1 Number of forest recreation sites/facilities maintained
5.1.1.4 Forest management activities will be consistent with Visual Quality Objectives (VQO's)	9-2.1 Compliance with Visual Quality Objectives
5.2.1.1 Level of investment in initiatives that contribute to community sustainability	New Measure with no equivalent from the older plans

CSA Z809-08 Core indicator or Local Indicator	Measure replaced from the 2008 update of the 2004 plan
5.2.1.2 Amount of stumpage paid in the Fort Nelson DFA	4-3.1 Fees paid by the Forest Industry
5.2.2 Level of investment in training and skills development	New Measure with no equivalent from the older plans
5.2.3 Level of direct and indirect employment	4-2.1 Direct employment in the forest industry 4-2.2 Indirect and induced employment
5.2.4 Level of Aboriginal participation in the forest economy	4-4.1 Opportunities for first nations 4-4.2 Opportunities for first nations (BCTS)
6.1.1 Evidence of good understanding of the nature of Aboriginal title and rights	New Measure with no equivalent from the older plans
6.1.2 Evidence of best efforts to obtain acceptance of management plans based on Aboriginal communities having a clear understanding of the plans	8-1.1 Percentage of cutblocks where information sharing took place 8-2.1 Access to resources for first nations 8-3.1 First nations opportunities to comment 8-3.2 Percentage of archaeological impact assessments sought
6.1.3 Level of management and/or protection of areas where culturally important practices and activities (hunting, fishing, gathering, Etc.) occur	8-1.1 Percentage of cutblocks where information sharing took place 8-2.1 Access to resources for first nations 8-3.1 First nations opportunities to comment
6.2.1 Evidence of understanding and use of Aboriginal knowledge through the engagement of willing Aboriginal communities, using a process that identifies and manages culturally important resources and values	8-1.1 Percentage of cutblocks where information sharing took place 8-2.1 Access to resources for first nations
6.3.1 Evidence that the organization has co-operated with other forest dependant businesses, forest users and the local community to strengthen and diversify the local economy	New Measure with no equivalent from the older plans
6.3.2 Evidence of co-operation with DFA related workers and their unions to improve and enhance safety standards, procedures and outcomes in all DFA workplaces and affected communities	9-4.1 Safe company registration and certification 9-4.2 safety incidences 9-4.3 Number of serious injuries 9-4.4 Number of fatalities
6.3.3 Evidence that a worker safety program has been implemented and is periodically reviewed and improved	9-4.1 Safe company registration and certification
6.4.1 Level of Participant satisfaction with the public process	7-1.3 Effective public advisory group 7-1.4 Equitable and inclusive deliberation process
6.4.2 Evidence of efforts to promote capacity development and meaningful participation in general	7-1.2 Methods used for public communication 7-1.3 Effective public advisory group 7-1.5 perceptions of members of the Fort Nelson public advisory group
6.4.3 Evidence of efforts to promote capacity development and meaningful participation for Aboriginal communities	New Measure with no equivalent from the older plans

CSA Z809-08 Core indicator or Local Indicator	Measure replaced from the 2008 update of the 2004 plan
6.5.1 Number of people reached through educational outreach	7-1.2 Methods used for public communication
6.5.2 Availability of summary information on issues of concern to the public	New Measure with no equivalent from the older plans

Table 4: Dropped Measures from the Amended 2004 SFMP

Dropped Measure	Reason for deletion
2-1.1 Site index	This measure was dropped because of the high variability in the methodology of measuring Site Index for any given site. There are three methods for calculating SI, and there is no way of knowing how the original SI was derived. This makes any comparison to a newly calculated SI very difficult to reconcile.
2-4.1 Treatment plans for natural disturbance events	As natural disturbance events are not under the control of the Participants, neither is the legal responsibility for management of these events which are not triggered by the actions of the participants. The treatment of such areas would have to be voluntary. Such losses to natural disturbance would be taken into account by the TSR process, resulting in downward pressure on AAC in the short term.
2-4.2 Percent of catastrophic natural disturbance events due to forestry activities	If forestry activities were to result in a catastrophic natural disturbance or to exacerbate a natural disturbance, the Participants would be required to help with the mitigation as a matter of law.
4-2.3 Dollar value of BCTS timber sales and total timber volume advertised by BCTS	This measure did not really fit in with any of the elements from the 6 CSA criteria.
4-3.2 Personal income taxes paid	This measure did not fit in with any of the elements from the 6 CSA criteria, and was considered inappropriate by the Participants as it was reporting personal information.
4-5.1 Perceptions of Canfor and BCTS	This measure did not really fit in with any of the elements from the 6 CSA criteria.
4-5.2 Competitive primary milling facility	This measure was removed as the presence of a competitive primary milling facility is controlled by the lumber market, which is beyond the control of the Participants to influence.
6-1.1 Employments by broad sector	This measure is out of the scope of control of the Participants and as such not appropriate for the SFMP
6-1.2 Employment by industry	This measure is out of the scope of control of the Participants and as such not appropriate for the SFMP
7-1.1 Stakeholder database	This measure did not really fit in with any of the elements from the 6 CSA criteria. The stakeholder database has been retained as a tool to be used by the participants to assist in efforts to inform the public about the SFM activities of the participants.

Appendix 2 – Criterion 1 Supporting Data

Table 5: Rare and Uncommon Ecosystems in the Fort Nelson DFA

Table 6: Forest Cover Type

Table 7: Required Percentage of Retention in the DFA

Table 8: Current Percentage of Old Seral Stage by NDU

Table 9: Current Stand Level Retention Percentage

Table 10: Area in Stands Less than 20 Years Old and Polygons labeled as Shrub Area

Table 11: Areas in Stands with the Label NPBr

Table 5: Rare and Uncommon Ecosystems in the Fort Nelson DFA

Rare Ecosystems in the NHLB	Forest Area (ha)
Group #	
7 - BWBS dk1 (02), SBS mk1 (03), SBS mk2 (02)	532
73 - BWBS dk1 (06)	2,397
71 - BWBS dk1 (07)	704
74 - BWBS dk1 (08)	74
69 - SWB mk (09)	346
Uncommon Ecosystems in the NHLB	Ecosystem Description
3 - SWB mk (02)	5,695
36 - ESSF mc (05)	8,158

Table 6: Forest Cover Type*

Cover Type	CFLB (ha)	THLB (ha)	NHLB (ha)	Baseline % of CFLB
Pure hardwoods	1,071,994	657,375	414,619	19.0%
Hardwood-leading mixed	452,116	205,060	247,055	8.0%
Pure conifers	3,583,672	1,123,399	2,460,273	63.6%
Conifer-leading mixed	532,327	302,898	229,428	9.4%
Total Area	5,640,109	2,288,732	3,351,375	100%

*From 2011 SFMP analysis.

FSP retention targets revised in February 2013 and will be updated in 2013 SFM annual report.

Table 10: Area in Stands Less than 20 Years Old and Polygons labeled as Shrub Area*

	CFLB (ha)	THLB (ha)	NHLB (ha)
Stands < 20 years old	271,841 (100%)	53,665 (41.3%)	218,217 (58.7%)
TSA Total Area (ha)	4,974,245 (100%)	1,462,367 (29.4%)	3,512,614 (70.6%)

*From 2011 SFMP analysis.

These numbers will become the new baseline data as they are based on the 2011 VRI data set and TSR 3 data.

Table 11: Areas in Stands with the Label NPBr*

	CFLB (ha)	THLB (ha)	NHLB (ha)
Stands labeled NPBr	756	1	1
Stands labeled NCB	N/A	N/A	N/A
Stands labeled Shrub low and shrub tall	183,449.5	9,425.1	9452.1

*From 2011 SFMP analysis.

Please note in the 2011 VRI data it appears that the designation of NCB (Non-commercial brush) has been combined with Shrub Low and Shrub High.

Figure 7: Oil and Gas Impact Risk Assessment

2011/12 Fiscal Year	Total Area (ha)	Total Volume (m3)
Oil & Gas Harvest Activity		
Total New Cut Area - Oil & Gas	979.1	
Total Merchantable Volume Cut - Oil and Gas		149,071.51
Potential Forest Licensee Harvest Activity		
Total Annual Cut Area - BCTS & Canfor	4502.72	
Total Merchantable Volume Cut - BCTS & Canfor		1,463,384.00

Data provided by OGC Nov 26, 2012

TSA Impact - Classification	Total Area (ha)	Total Volume (m3)	O&G Cut % of Area	O&G Cut % of AAC	Participants Cut % of Area	Participants Cut % of AAC
TSA area	9,868,067		0.010%		0.046%	
Area not in DFA (private, federal, indian, woodlots, etc)	29,927					
Area managed by MFLNRO (DFA)	9,838,140		0.010%		0.046%	
non productives areas (non forest, alpine, existing roads and trails, non commercial cover)	4,096,928					
Productive crown forest landbase	5,741,212		0.017%		0.078%	
NHLB area	4,308,943					
THLB area	1,432,269		0.068%		0.314%	
TSA AAC		1,625,000		9%		90.1%
Non certified tenures AAC		101,000				
Certified tenures						
BCTS AAC		299,668				
Canfor AAC		1,163,716				
Total Certified Participants AAC	979.1	1,463,384		10%		100%

Discussion:

O&G harvest activity averages approximately 979 ha per year of a combination of NHLB and THLB CFLB. This area includes road construction, well sites, seismic areas and pipeline areas. O&G timber harvest impact on DFA amounts to 0.01 % of the total DFA area annually. This is compared to forest industry impact on the DFA of 0.05% of the total DFA which is primarily comprised of THLB area.

When Canfor is operating, the majority of merchantable timber harvested by O&G is purchased by Canfor, which serves to reduce the total volume harvested under Canfor's forest tenures.

Therefore the impact on the AAC is minimal. Of the 2 non certified tenures identified in the AAC apportionment, no forest planning has occurred consequently, no forest harvesting has occurred. No harvest activity is expected under these non certified tenures.

Conclusion:

Given the small annual impact on the total DFA area from O&G activity, there is little risk to the participants of not achieving SFMP landscape level ecological commitments as a result of O&G harvest activity.
