MIHARI

TOTAL QUALITY MANAGEMENT

Available only at Canfor Pulp, Mihari is a suite of technology providing the next generation in pulp quality management, process control and ready-to-use customer information.

WHAT IS MIHARI?

MIHARI IS A GLOBALLY UNIQUE INSTALLATION OF QUALITY MANAGEMENT AND CONTROL TECHNOLOGIES. For the first time ever a pulp mill has total quality monitoring through the pulp process. This system is specifically designed to fit our customers demanding and high quality technical specifications, providing quality info and online Certificate of analysis to our customers earlier in the process.

MIHARI

OUR CUSTOMERS WILL ALWAYS KNOW EXACTLY WHAT THEY WILL RECEIVE, BEFORE IT EVEN LEAVES THE MILL.

WHAT ARE THE BENEFITS OF MIHARI?

With Mihari in place **100% of finished pulp** shipped from our Prince George mills **is quality tested.** This cutting edge technology replaces the industry standard of sample testing less than 1% of the finished pulp.

Canfor Pulp can now **guarantee** that every bale of pulp shipped will meet or **exceed** the exact grade or required **technical specification** before the product leaves the mill.

The technology provides an unmatched level of **quality assurance,** and gives customers the most detailed and **accurate online information on pulp shipments.**
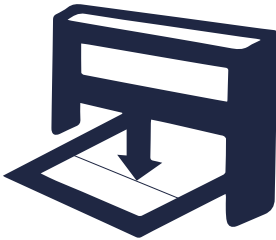

WHAT SYSTEMS MAKE UP MIHARI?

PULPEYE ®

Measures pulp characteristics

Fibre length
Kappa
Consistency

pH
Pulp brightness
Fibrewall thickness

VALMET PROCESS QUALITY VISION SYSTEM

Measures dirt and shives
in 100% of finished pulp
